

Hydraulic Clamp

T-Slot Automatic-Slide

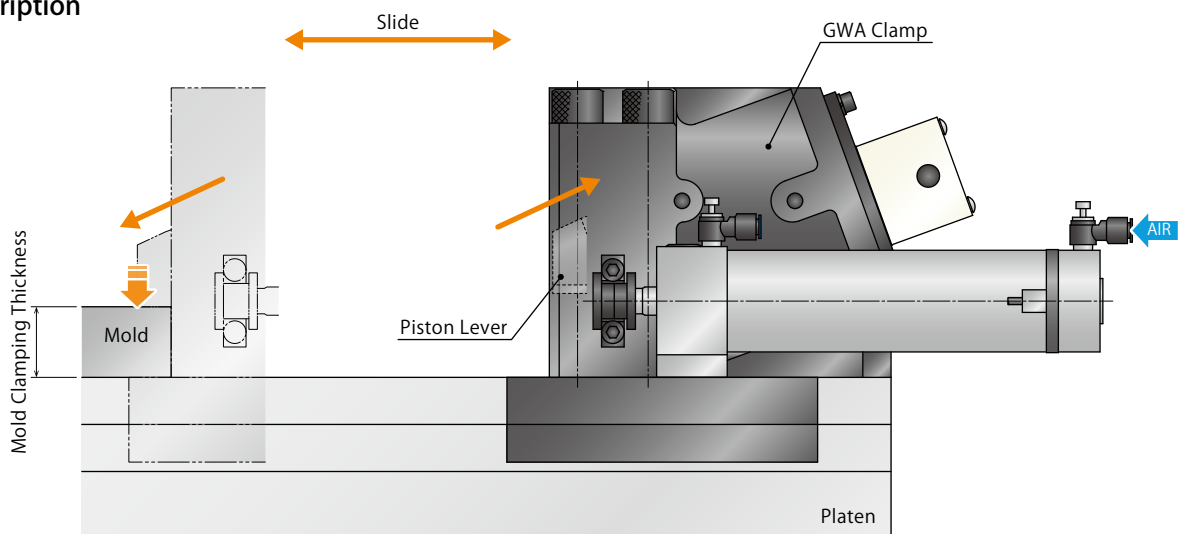

Model GLA

Automatic-Slide Model of GWA Clamp

Most suitable for inaccessible area or non-operation side.
Clamp movement is completely automated.

Action Description

Locked State

GLA clamp moves forward with the air supply to the air cylinder. The piston lever moves forward and clamps the mold with the pressure supply to the lock port. Clamp action can be confirmed by the limit switch inside the clamp.

Forward End Detection **ON**
Backward End Detection **OFF**

Released State

Release the locking pressure and supply the hydraulic pressure to the release port. The lever is retracted and set inside the clamp body. After that, the clamp is moved backward by the air cylinder.

Forward End Detection **OFF**
Backward End Detection **ON**

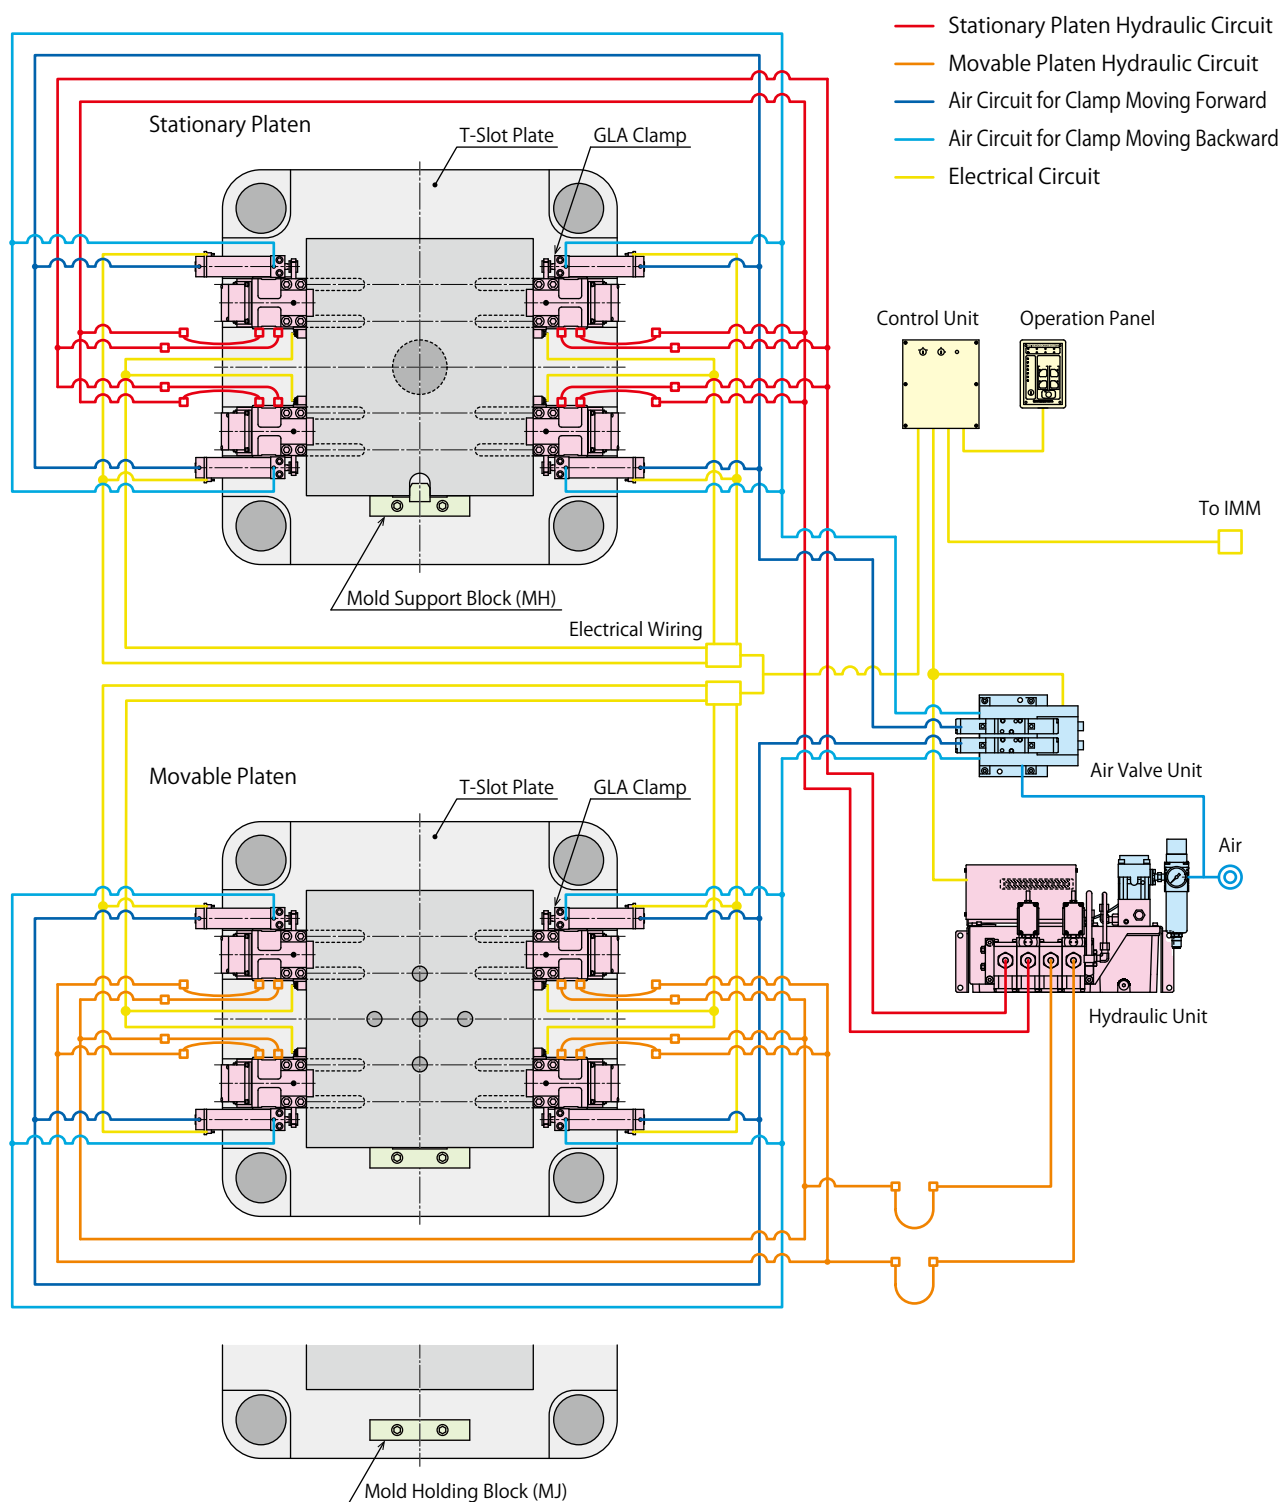

※ We provide GLA clamp according to the mold clamping thickness and T-slot dimension. Please refer to the external dimensions for detail.

System Structure Example

The basic structure with GLA clamp that is slid automatically in the T-slot by the air cylinder.

This system is able to control one stationary platen circuit and movable platen circuit with a two-circuit hydraulic unit.

- ※4. Please contact us for more frequent use.
- ※5. Please contact us for fluids other than those mentioned on the list.
- ※6. If hydraulic viscosity is higher than specified, action time will be longer.
- ※7. If using it at low temperature, action time will be longer because the viscosity of hydraulic oil becomes higher.
- ※8. It shows reference dimensions. The dimension may differ from specification depending on T-slot (T-leg) dimension, dimension of clamp cylinder that sticks out of T-slot during lock action, or body material.
 1. Do not exceed the clamp's capacity.
 2. There is $\pm 10\%$ variation in holding force and clamping force.
 3. The accuracy of the mold clamping thickness (h dimension) should be within $\pm 0.5\text{mm}$.
 4. Please refer to GWA clamp pages (p. 43-48) for details of clamp body.
