

Hydraulic Clamp

Manual Block-Slide

Model GBM

Hydraulic Clamp for an IMM without T-Slot

Suitable for Non-Standardized Mold Widths

Longer stroke allows for variation in mold clamping thicknesses.

Action Description

Locking Operation

Slide GBM clamp to the mold by hand.
When hydraulic pressure is supplied,
the piston lifts up, and the clamp lever
pivots on the pin and locks the mold.

Releasing Operation

When hydraulic pressure is released,
the piston descends with built-in spring
force, and the clamp lever becomes
released state with the lever return spring.
Slide GBM clamp back by hand.

● **System Structure Example**

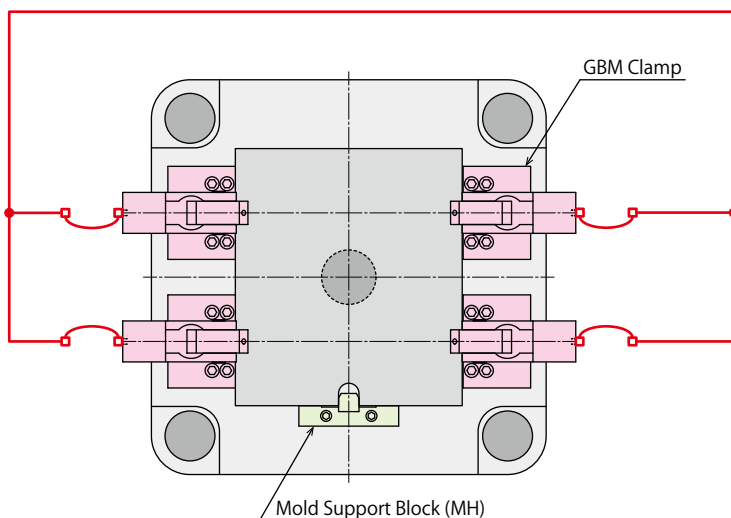

The basic structure with GBM clamp that is slid manually in the fixed block.

This system is able to control one stationary platen circuit and two movable platen circuits with a three-circuit hydraulic unit.
